Create an Instagram reel/ YouTube shorts with AI

Step 1: Generate script

visit: https://www.squibler.io/ai-story-generator and provide a topic such as adventure or mystery song etc. A short story will be generated hence. Login if needed

Short story:

Ava was a young girl with a mind as sharp as a razor. She loved nothing more than solving puzzles and delving into the complexities of the computational world. While other girls her age were playing with dolls and makeup, Ava was busy coding and designing her own websites. One day, she stumbled upon a mysterious program that promised to unlock the secrets of the universe. Without hesitation, Ava dove in, determined to crack its code. As she typed furiously on her keyboard, the screen began to glitch and swirl with colourful patterns. Suddenly, Ava found herself transported to a digital realm unlike anything she had ever seen before. She was greeted by a group of intelligent beings who presented her with a task - to save their world from a dangerous virus that threatened to destroy everything. With her quick thinking and computational skills, Ava was able to defeat the virus and restore order to the digital world. As a reward, the beings gifted her with a powerful computer chip that would enhance her abilities in the real world. From that day on, Ava became known as the smartest girl in the computational world. She continued to challenge herself and push the boundaries of what was possible, using her skills to make a positive impact on both the digital and physical worlds. And she never looked back, embracing her love for all things computational with a fierce determination and a brilliant mind.

Step 2: Generate video
visit: https://www.veed.io/tools/ai-video/text-to-video and provide the story we created. A small video will be created. Login to download. The video will be created as well as can be edited and exported.
Generate conversational podcast with various audios using ai
tools to used:
Claude ai or ChatGPT: for podcast script generation
murf ai: text to voice
Step 1:
generate a podcast script for a certain topic. Example prompt: create conversation between 3 friends. the topic is mysterious classroom. provide one sentence for each person as dialogue. create the script
Step 2:
Save the script into txt file. Import the txt file in murf ai. Split the dialogues. Add character to voice your individual character. Click play button for each dialogue to generate text. After that click play button on bottom to create a complete audio. Download it
Step 3:
Upload on podcast platforms or video sharing platform
